

AUTO PRINthead CLEANING PROCESS ON THE MAILING MACHINE

Acquire multiple blank sheets of paper, fold each sheet in half for testing the print.

- To clean the print heads automatically:

Press  and select the path: **INK CARTRIDGE**, then **CLEANING PROCESS**

- The cleaning starts automatically.
- Add a folded blank sheet of paper into the feeder and press **OK** to perform a print quality check.

If the print quality has not improved, repeat this process up to six times, as each cleaning cycle targets different areas of the printhead.

If print quality does not improve after all six attempts, proceed with the next step: **Clean Printhead (Manual)**, and then repeat the process.

If you have completed all of the above steps and the issue persists, please contact OMECorp Service at **918-664-2588, option 1 for Service**.
